

PROJECT DEVELOPMENT PHASE

SPRINT 3

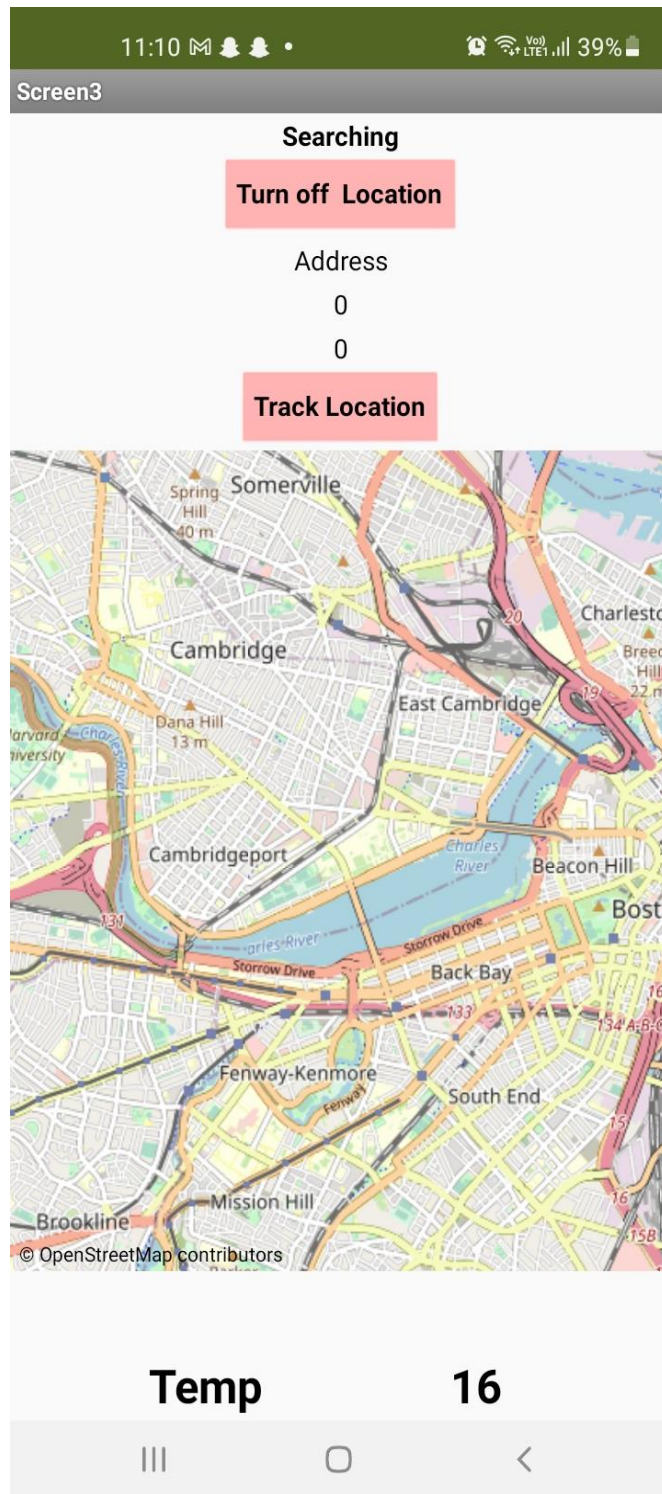

In sprint 3 we will come to know about the functioning of the app.

When you click the health button you view the child's body temperature.

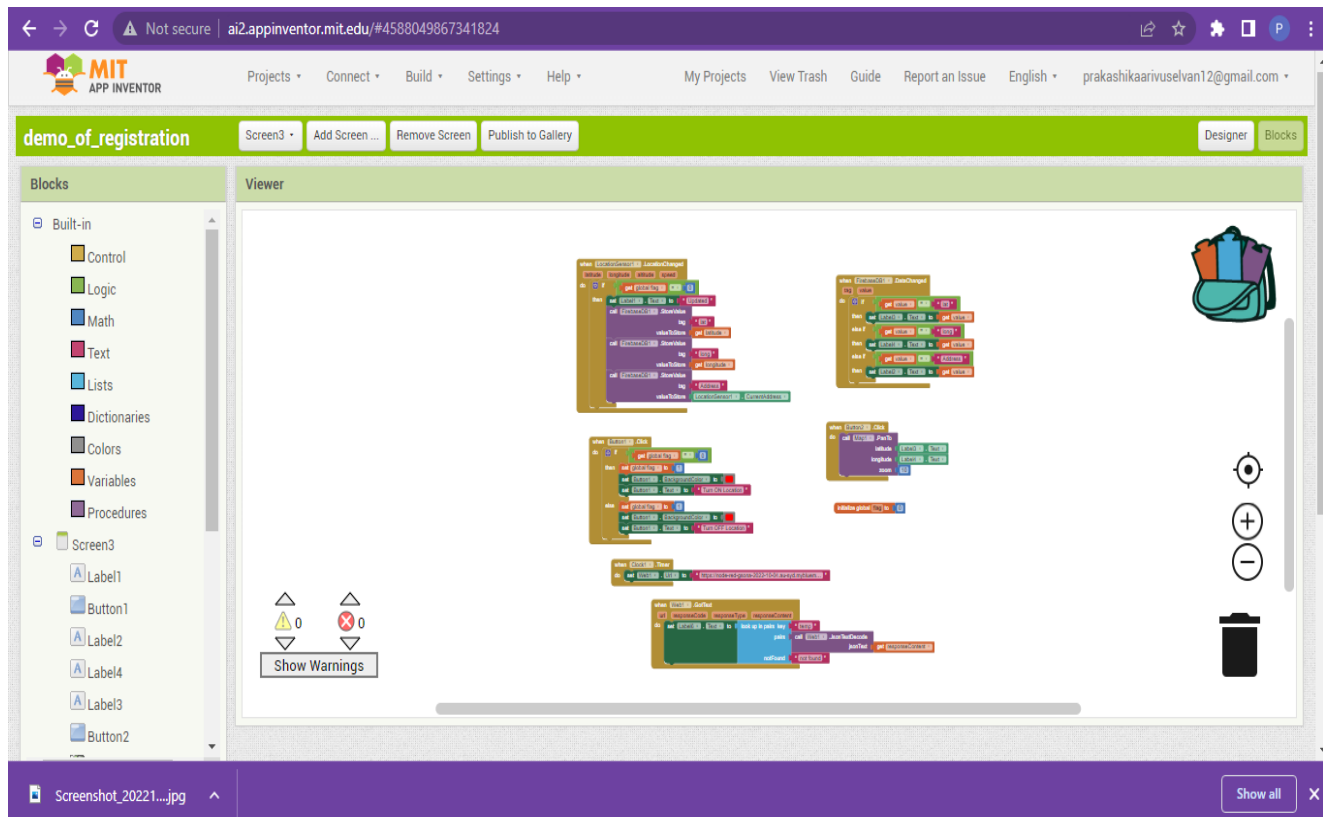

Same like that when you click the location button you can able to track the current location of the child's

The temperature which is visible in the screen will say about the child current body temperature.

This are blocks (backend), which are functioned as a programmed operation for the each screen in the app.

This which shown above is exclusively for location tracking and temperature sensing.
